PREFACE TO FOURTH SERIES

The Fourth Series of the Royal Society's Catalogue of Scientific Papers, of which this is the first volume, comprises the titles of papers published or read during the period 1884 to 1900, and concludes the work undertaken by the Royal Society. The Catalogue thus completed will contain titles of papers for the whole of the nineteenth century. The continuation of the work is now in the hands of the authorities of the International Catalogue of Scientific Literature, which deals with the titles and subjects of papers published after the end of the year 1900.

In order to obtain the material for the present Catalogue arranged according to Authors, and also for the Subject Indexes of the various sciences, the serial publications on the list for the period 1884–1900 were submitted to Referees conversant with the sciences treated in them, who selected the papers that ought to be catalogued. The Referees have, in addition, advised the inclusion of parts of some Serials which had been omitted in previous volumes of the Catalogue either by accident or in consequence of their being at the time inaccessible. These and all other entries relating to papers previous to 1884 are marked by asterisks in accordance with the method adopted in the earlier series of the Catalogue.

In consequence of the selection of the papers having been made by different Referees, and especially on account of the different characters of the subject matter, there will probably be found some differences of method of selection as regards the less exactly defined sciences, especially in the cases of Anthropology and Geography.

When the preparation of the slips was commenced, it was intended to number the entries consecutively under each author, as had been the practice in the previous twelve volumes; but, in consideration of the time occupied in identifying the authors in order to connect the numbers with those in former parts of the Catalogue and the large quantity of matter to be dealt with, the Committee decided that the numbering should be discontinued. Thus the numbering is here confined to entries under the letter A.

Where the full names of authors are not given at the headings of the papers, but only their surnames, a dash has been placed after the surname, if there is no probability of confusion with other authors. Where such confusion might occur, reference books have been consulted or, as a last resort, application has been made, when possible, to the authors themselves for information. In the cases in which names of authors have been made complete by addition of parts not appended to the original papers the additions are printed in square brackets. The preparation of Catalogues and hand lists would be much

25871

facilitated if the editors of Scientific Journals would insist on authors giving their full names in all their papers; this is the practice in some Societies, but it is by no means universal.

In the compilation of the supplementary Volume XII it was decided that reference should be given only to the original publication of a paper, and that abstracts should not be inserted unless they were of papers published in the less well-known languages. In order to find the original paper it was often necessary to compare it with its reprints, and to select the one that appeared to be most suitable. This was found to entail a large amount of work, and the Committee has therefore thought it advisable to discontinue such procedure and to include under one entry the papers from different Serials which have identical titles and approximately the same date. This course has economised time; and it has the advantage of making reference more easy where some of the Serials are not readily accessible. Such entries are, however, not quite complete because a considerable number of the duplicates had been destroyed before this decision was made.

When possible, abstracts of papers in languages other than English, French, German, Italian or Latin are included in the entries along with the originals.

When the reference to a paper contains more than one set of pages these usually represent different parts of the same paper; but in the case of papers in the less familiar languages contained in Serials which also issue a translation or résumé of the paper in some better known language, the additional paging sometimes represents this translation, not a continuation of the paper. In certain Serials the second paging has been marked *Rés.* irrespective of the language of the translation or abstract.

Anonymous papers have not been entered in the Catalogue of Authors, although their contents have been used for the Subject Index. In former volumes these anonymous papers have been printed separately under the respective Serials, after Z.

The titles of important Patents have been collected and will be placed at the end of the Catalogue.

Very brief notes which are especially numerous in the Zoological Serials have not been catalogued owing to inevitable limitations of space.

For the transliteration of the names of Russian authors the system adopted by the International Catalogue of Scientific Literature, based on the phonetic value of Roman letters in Bohemian, has been used, cross references being employed to facilitate identification.

A list of the 1555 Serials which have been examined for the preparation of the Catalogue, together with the Abbreviations used for their titles, is prefixed.

A large number of expert Referees have assisted in the selection of the papers and in making the titles for the Subject Index, and the Committee is indebted for this responsible and valuable work to Miss K. A. Burke, Miss G. L. Elles, Miss Alice Everett, Miss E. J. Forbes, Miss W. M. Hudson, Miss G. L. C. Matthaei, Miss F. M. G. Micklethwait, Miss M. H. Naylor, Miss E. Perrin, Miss Burna Pool, Mrs Hingston Quiggin, Miss Ida Smedley, Miss Frances A. Welby, Miss A. Werner, Mr F. Allen, Dr E. F. Armstrong, Dr A. P. Beddard, Mr T. Duncan Bell, Mr J. H. Binder, Mr W. W. Bryant, Dr John Cameron, Dr E. P. Cathcart, Mr C. V. Crook, Mr J. T. Cunningham, Mr R. J. Dallas, Mr W. A. Davis, Dr E. Drabble,

Dr W. d'Este Emery, Professor J. D. Everett, Mr W. F. Fallaize, Dr Herbert French, Dr F. E. Fritsch, Mr A. T. Goodfellow, Dr E. Goulding, Mr W. F. Gwinnell, Mr James S. Harding, Mr R. Hargreaves, Dr David Fraser Harris, Dr T. A. Henry, Mr T. G. Hill, Dr J. Horder, Mr H. Knapman, Dr R. A. Lehfeldt, Mr W. Lowson, Mr T. H. Pope, Mr H. E. Schmits, Mr J. H. Shaxby, Dr E. W. Skeats, Mr L. J. Spencer, Mr R. Strachan, Mr W. L. Symes, Mr Northcote W. Thomas, Dr W. Marshall Watts, Mr G. Harold Wilson.

The Committee is indebted to the authorities of the British Museum, of the Natural History Museum, of the Royal College of Surgeons, of the Patent Office, and of the Meteorological Office, for the facilities given to the type-writers and revisers of the Catalogue staff, in their task of copying titles of papers from the Serials in the libraries of these institutions; the Committee is also indebted to the Cambridge University Library, to the Chemical Society, the Geological Society, the Linnean Society, the Royal Astronomical Society, the Royal Geographical Society and the Alpine Club for the loan of books for the preparation of the Catalogue.

To the authorities of these Libraries and of others which have been consulted the Committee gratefully expresses thanks for the assistance that has been received.

The present volume contains 11551 entries of titles of papers by 2001 Authors with the initial A, and 51720 entries of papers by 6928 Authors with the initial B, making a total of 63271 entries by 8929 Authors.

In consequence of the large amount of material for the Period 1884–1900, it has been found necessary to print this and the succeeding volumes in smaller type than that used in volumes I to XII.

The Catalogue Committee desires to record its thanks to the persons constituting the Staff entrusted with the work of arranging the material and preparing it for the press. In particular it acknowledges indebtedness to the Director, Dr Herbert M^{c}Leod, F.R.S., for the scrupulous care which has characterized his management, to Miss Bremner, Miss Vagner, Miss Barnard, Miss Earthy, Miss Harkness, Miss Hanbury, and Miss Chapman, and to the other members of the Catalogue Staff, for their untiring zeal.

The Syndics of the Cambridge University Press have undertaken the complete risk of printing and publishing, as regards both the Catalogue of Scientific Papers and the Subject Index. It will be the care of the Committee, and it is hoped of the Scientific world generally, to use their best endeavours that this public-spirited action shall not result in financial loss.

The thanks of the Committee are due to the officials of the Cambridge Press for their unfailing courtesy in the discharge of the complex task of printing the material.

TRANSLITERATION OF RUSSIAN

The system of transliteration of the Russian alphabet adopted for the International Catalogue of Scientific Literature is based on the phonetic value of Roman letters in Bohemian:—

а	б	в	г	д	ж	з	и	й	к	л	м	н	о
a	b	v	g	d	ž	z	i	j	k	l	m	n	o

п	р	с	т	у	ф	х	ц	ч	ш	щ	э	ю	я
p	r	s	t	u	f	ch	c	č	š	šč	e	f	i

е	at the beginning of a syllable	e
е	after a consonant	e
ѣ	at the beginning of a syllable	jě
ѣ	after a consonant	ě
ъ	is not transcribed.	
ь	before a consonant or as a final	ĭ
ё	as an initial	jë
е	after a consonant	ë
я, ю	at the beginning of a syllable	ja, ju
я, ю	after a consonant, with which they constitute a syllable	ĭa, ĭu
